## Resume

The Lighthouse report provides an overview of your website's performance and quality across different areas. Here's a simple

breakdown: 1. Performance (56/100): This score indicates how fast your site loads, which is important to keep visitors engaged. A higher score means faster loading times. Some suggestions to improve this could be optimizing images, minifying CSS and JavaScript files, or leveraging browser caching. 2. Accessibility (95/100): This score measures the inclusivity of your website for people with different abilities. A high score in this area means that your site is more accessible to a wider audience, including those using screen readers, keyboard navigation, or other assistive technologies. To further improve this score, consider adding alt text for images and ensuring that all interactive elements are easily operable by users with disabilities. 3. SEO (63/100): This score estimates how well your site is optimized for search engines like Google. A higher score can help your website rank better in search results, driving more traffic to your site. Some ways to improve this score are by using descriptive and keyword-rich titles, meta descriptions, and headings, as well as ensuring that your site is mobile-friendly and fast-loading. 4. Best practices (96/100): This score assesses your website against common web development best practices, such as securing your site with HTTPS, ensuring a responsive design for different devices, and minimizing code errors. A high score in this area means that your site is built following modern and secure coding standards. In summary, your website has a good foundation in terms of accessibility, best practices, and security, but there is room for improvement when it comes to performance and SEO. By focusing on optimizing images, improving loading times, and enhancing your site's structure for search engines, you can provide a better experience for your visitors while also increasing your chances of being found online.
